

Blake Lower

I am a hard-working, self-driven, and passionate developer who is always willing to contribute to teams and step out of my comfort zone. I enjoy the challenge and am addicted to the rewarding feeling of finally completing a task or learning a technology that seemed incredibly intimidating at first. I love being a team player and learning from my superiors. When it comes to program, I view even the most challenging day or task as something that will help my growth and will remain thankful for the experience. I'm a lover of design as well, I believe design is what truly brings a site together.

EXPERIENCE

Freelance Web Developer/Designer, Remote (Oregon and South East Asia)

January 2019 - PRESENT

I learned the majority of web development while living in SE Asia and Oregon. Through these skills, I was able to network with other remote workers who had needed my assistance in building their websites and marketing needs. I was able to build my brand with my partner and worked with several clients inside and outside the United States while being completely self-sustainable.

Design Off The Boat, Remote — Designer, and Developer

March 2020 - June 2020

Helped with layouts, information, and color schemes. Also made sure the sites were accessible and responsive and had an easy UI UX to it.

EDUCATION

Lambda School of Software Engineering and Computer Science

Studied full-stack web development (primarily focusing on HTML5+CSS3, Javascript and it's frontend and backend frameworks. Built full-stack and responsive applications through pair programming, problem-solving, and regular team standups.

Portland, OR 97402

SKILLS

Frontend:

Html5+CSS, Bootstrap + Material UI, Vanilla Javascript,
and Reactjs/Redux
Mobile Responsive Sites and applications.

Design:

Canva
Figma
Webflow
WordPress
Responsive sites

Backend:

Node.js+Express, SQLite 3,
Knex, and familiarity with
MongoDB

PROJECTS

Pupflix! — A Netflix clone but for dogs only

Pupflix was created with React.js and is fully responsive. The user can log in with a fake email and password. Once entered in the site the user can hover over an image which will then play a short film about dogs.

Simplicity — An E-com store

Simplicity is a mobile-friendly app where users can buy some of their favorite clothing. I used **react-PayPal-express-checkout** to simulate a real user experience for the application. I used Context API for the app as well.

Star Wars Space Invader — Vanilla JS Game

I used solely Vanilla JS to create an imitation of the Space Invader Game. This project is Star Wars theme and there are enemies shooting at the player and the player must shoot back. I was able to incorporate key functionality and use DOM

Github: <https://github.com/blakelower/star-wars-space-invader>

Website: <https://star-wars-space-invader.now.sh/>

Nomad Journal— *Group Project*

In Nomad Journal I used Redux and was able to create a login and register authorization by connecting the front end to the backend. Users are able to post their pictures from their vacation and add captions, messages and location
